Installing your sign with standoffs - No template

**<u>Tools Needed:</u>**
1) Drill
2) 1/16" drill bit (or similar for drilling a pilot hole)
3) ¼" drill bit (for drilling wall to insert wall anchors)
4) Level
5) Hammer (for inserting the wall anchors)
6) Phillips head screwdriver
7) Standoffs, screws, wall anchors (**provided**)
8) Allen wrench to tighten standoffs

Installation

Step 1 - Hold your sign up on the wall, making sure it's level. Mark the holes to be drilled out.

Step 2 - Drill out the holes you just marked with a ¼" drill bit, and insert the wall anchors.

Step 3 - Insert a screw through the female side of the standoffs.

Step 4 - Using a drill with a phillips head, screw the screw with the standoff into the wall anchor. Repeat for all of the mounting points.

Step 5 - Place your sign overtop of the standoffs, and screw the male part of the standoff into the female part.

Step 6 - Using an allen wrench, tighten the screw on the side of the standoff.

For more information you can check this Youtube video of how to install the standoffs: https://www.youtube.com/watch?v=1abrB69kZ9c
